Postgraduate Program Intelligence Management and Security

In a society where the security and defense studies extend to new dimensions of social, economic and information in a complex international environment, it is important to promote scientific knowledge and analytical tools and methodologies, much needed to evaluate, manage and make decisions in this field. Those concerns result from the challenges posed by the new framework of international security and defense, the information culture, the international cooperation and the challenges of globalization that shape the global power relations, where the strategic decision processes and the framework of security and intelligence should be addressed.

Goals

The goal of this program is to train technical staff and managers to:

- Obtain comprehensive skills in the various stages of the information production cycle;
- Understand, analyze, and research globalization processes;
- Demonstrate knowledge of intelligence and information gathering, and techniques of data analysis;
- Communicate complex issues, clearly and effectively;
- Promote key skills to support decision making, enhanced by the use of Competitive Intelligence and Business processes;
- Understand the role of strategic intelligence to support decision making.

Who is it for?

The program is aimed at undergraduates in any compatible field who wish to acquire skills related to security and strategic studies or update their knowledge and explore new perspectives, given the current theories and subjects.

Among the potential target of this postgraduate program, those who work in the fields of intelligence and security, in particular elements of the forces and security services, military, decision-making support and competitive intelligence managers, NGO technicians, other technicians of the public administration responsible for information management, stand out in the application process.

Study Plan

The curriculum of the postgraduate program consists of 8 mandatory course units, a total of 60 ECTS.
